 CATEGORY :
 ABS. JOUR. : RZKhim., No. 1959, No. 73053
 AUTHOR : Mitic, S.
 INST. :
 TITLE : The Influence of Temperature and Air-Humidity
 ORIG. PUB. : Tehnika, 1958, 13, No 2, Prehran. Ind., 12,
 No 2, 17-20
 ABSTRACT : Description of experiments on making of
 kackaval cheese from cow's milk. Moisture content of the
 finished cheese is 22-26%. Loss of moisture over H_2SO_4
 11.2-11.5%; under normal conditions 0.32-0.35%. Keeping over
 distilled water resulted in weight increase of the cheese
 by 0.023-0.035%. With a ratio of moisture and fat content
 in the cheese equal to 1:0.7 and 1:0.5, extensive sepa-
 ration of fat was observed. The separation of fat is also
 influenced by temperature and humidity of the air.

TITLE: Arithmetic blocks based on Hall effect

SOURCE: Fiziko-matematicheskoe spisaniye, v. 8, no. 4, 1965, 261-279

TOPIC TAGS: Hall effect, arithmetic, arithmetic unit

ABSTRACT: Following a brief survey of various devices for the multiplication of functions by analogue methods, the author concentrates on the possibilities offered by the Hall effect. She 1) describes elementary multiplication blocks using a single Hallotron, 2) presents the theory and construction details of elementary multiplication blocks with a single compensated Hallotron, 3) outlines methods for the multiplication of three functions; 4) gives circuits of two-Hallotron blocks, discusses in details the design and operation of two blocks with two inputs each encompassed by a strong feedback, 5) extends the reasoning of (4) to a system of two blocks with three inputs each encompassed by a strong feedback and presents a comprehensive list of 44 operations which can be realized by such a system, and 6) describes and discusses in considerable details the types of errors encountered in Hall multiplication blocks. Orig. art. has: 12 figures and 1 table. [JPRS: 36,845]

Title : A Biochemical and Physiological Investigation of
Avitaminosis C in Connection with its Effect on
Higher Nervous Activity.
Orig Pub. : Izv. Med. in-ti Bulg. AN, 1956, 13, 213--237

Abstract : A gradual (over a period of 30--40 days)
reduction in the levels of ascorbic acid in
the blood, brain, heart, liver, and adrenals
was observed in 17 guinea pigs from whose diet
vitamin C had been excluded. In conjunction
with the development of avitaminosis of several
days duration, signs of increased cortical
excitability were noted (shortening of the
latent period of motor-alimentary conditioned
reflexes, a decrease in the time taken to run
to the food), which clearly preceded the clinical
manifestations of disease. Subsequently there

SUBJ. : Improvement of the technological process of oil
refining, particularly for aviation gasoline
ORIG. PUS. : Vozdushnye protsessy, 1959, 8, No. 4, 27-30

ABSTRACT : A new technology of the production of oils
for locomotives and railroad cars is proposed,
in which the additives of spindle oil are omitted.
The methods of impure oil inputs are excluded. The method
of manufacturing oil by means of mixing, in
different ratios, the resultant product (gasoline
benzene and kerosene), motor and rocket fuel
is applied.
